### (2) Reason for the revision

- We have revised net sales forecast because (1) net sales were better than the forecast in the first half as mentioned above and (2) we can expect increased sales in Semiconductor Equipment-related, Electronic Device and Automotive businesses in the second half. Meanwhile, profit is unchanged from the forecast, taking into consideration a decrease in profit margin due to (1) the weak solar panel market and (2) the intensified competition in the power semiconductor substrate market. (Assumed exchange rate has been changed from 150 yen per US dollar to 152 yen per US dollar.)

### **3. Dividend of surplus (interim dividend) and revision to full-year dividend forecasts**

Results of this term	<b>55.00</b>	-	-
Results of previous term	50.00	50.00	100.00

#### (2) Reason for dividend of surplus and revision to full-year dividend forecasts

- The Company clarified our policy for shareholders returns in the Medium-term Management Plan announced on May 31, 2024, as well as the measures to strengthen shareholder returns in the presentation titled “Regarding initiatives for realizing business administration conscious of capital cost and share price” released on July 31, 2024.
- Thereby, as we considered the recent business performance and revised the dividend level as measures to strengthen shareholder returns, we have increased annual dividend forecast from 100 yen per share to 110 yen per share and interim dividend from 50 yen per share to 55 yen per share for the dividends in this term.
